

Shipping, Receiving & Warehouse Management

Overview

On-time and accurate shipment of packages and parcels is critical to your client relations and the success of your supply chain relationships. Tighter controls on the receiving end can facilitate a smoother and timelier delivery process of materials and information to management and employees. Our professionals have honed their skills in shipping and receiving operations through successful client engagements across a wide range of industries. Features include:

- Mailing fulfillment
- Pick, pack & ship services
- Asset handling & security
- Hazmat shipping & receiving

Warehousing Services

MCS's on-site warehousing services include storage, retrieval, disposal, and inventory management of products, materials, information and other corporate assets. When off-site storage space is needed, our experienced site managers will coordinate with the required partners and conduct regular retrieval trips each day from your facility. Service features include:

- Inventory control & reporting
- Loading dock security & safety
- Power industrial vehicle (PIV) operations

Hazardous Materials

In the manufacturing and research and development environment, you can count on MCS's highly-skilled and trained professionals to handle your shipping and receiving operations safely and securely.

Our team has been trained and certified to International Air Transport Association (IATA) guidelines for the safe and proper handling, storage, packing, and shipment of hazardous materials (Hazmat). We can seamlessly support the shipping and receiving of products and materials that fall under Good Manufacturing Practice (GMP) regulations of the U.S. Food and Drug Administration. MCS employees have also fulfilled all safety compliance requirements for Hazmat under the Code of Federal Regulations (CFR).
